

Leading Biotech Company meets target utilizing SolveIT's technical expertise

In a snapshot:

Client:

A leading Biotech company

Business Issue:

Required a highly skilled resource for their ongoing project.

SolveIT's Solution:

Skills management suite, Java, J2EE

Business Result:

Project completed well in advance.

Business Issue

A leading Biotech Company based out of Massachusetts was working on its internal system developed using Java, J2EE, BEA Weblogic platform, Oracle DBMS and Windows and UNIX environment in order to store critical information that will be useful in developing a process that will document the prescriptions and medication accorded to patients suffering from a particular disorder. The company needed top of the line skills to manage and steer the project. This posed the following issues:

- Needed skills to efficiently develop and manage several modules that were critical to the overall process and also provide crucial feedback in developing the module further.
- Required on-time delivery of the project which was crucial in order to maintain the overall pace of the program.

Additional Challenges Faced:

- Needed dynamic skills in order to steer the project effectively.
- Also needed to gather information from functional analysts and develop different modules that required highly skilled expertise.

SolveIT's Solution:

- Thoroughly analyzed the project and began implementing our time-tested business methodology to match the skill sets needed with the existing pool of talent.
- After an intensive search, provided the right fit that worked on the deliverables.
- Worked on several modules including Inventory Correction, New Enrollment, and Patient Timeline that catered to the needs of the client.
- Met the demands of the client and managed to finish the deliverables well in advance of the deadline. Site became fully functional in record time of two months.

Business Results:

- Manage to finish crucial components of the project well on times that were critical in completion of the overall project.
- Able to better manage SolveIT's skill sets to design and develop other modules that were outside the scope of project.
- Successfully deployed the application on the production server.
